

Aft Shower Anchor Locker Details

The aft shower is nestled in the aft anchor locker.

It includes hot and cold water if you have the water heater option which is available when the engine is running or the boat is plugged into A/C 110v electricity. The shower head hose comes out of an opening to the left of the anchor center and is long enough that it pulls out of its opening far enough that one can shower while driving...

The anchor locker has a drain and the rode goes through a separate opening to the right of the anchor center and is contained within a wooden bin below the deck. All in all well thought out and handy. The locker is Danforth oriented and is typically for the 2nd anchor assuming you have the primary one on the forward roller.

Looking up at the fittings to the deck of the shower.

Anchor drain and wooden rode bin to the left.
